

- ・ 各製品における光線出射中心は、下記の通りです。
- ・ RayDataは代表例であり、製品特性を保証するものではありません。
- ・ RayData上の光束値は代表値です。所望の光束値を（例：仕様書記載のMIN値等）シミュレーション内で再入力の上、ご使用下さい。
- ・ Ray emitting center of each product is shown below.
- ・ RayData is a representative example and not a guarantee of product characteristics as such.
- ・ The luminous flux value in RayData is a representative value. RayData can be used in simulation but setup value should be the desired luminous flux value such as MIN luminous flux value described in Stanley's specifications.
